

WEEK 6: Java Lab

Name: Aaryan Prakash

USN: 1BM23CS006

Q) Create a package CIE which has two classes- Student and Internals. The class Student has members like usn, name, sem. The class Internals derived from Student has an array that stores the internal marks scored in five courses of the current semester of the student. Create another package SEE which has the class External which is a derived class of Student. This class has an array that stores the SEE marks scored in five courses of the current semester of the student. Import the two packages in a file that declares the final marks of n students in all five courses.

CIE/Student.java

```
package CIE;
```

```
import java.util.Scanner;
```

```
public class Student {
```

```
    protected String usn;
```

```
    protected String name;
```

```
    protected int sem;
```

```
    public void inputStudentDetails() {
```

```
        Scanner s = new Scanner(System.in);
```

```
        System.out.print("Enter USN: ");
```

```
        usn = s.nextLine();
```

```
        System.out.print("Enter Name: ");
```

```
        name = s.nextLine();
```

```
        System.out.print("Enter Semester: ");
```

```
        sem = s.nextInt();
```

```
    }
```

```
    public void displayStudentDetails() {
```

```
        System.out.println("USN: " + usn);
```

```
        System.out.println("Name: " + name);
        System.out.println("Semester: " + sem);
    }
}
```

CIE/Internals.java

```
package CIE;
import java.util.Scanner;

public class Internals extends Student {
    protected int[] internalMarks = new int[5];

    public void inputCIEmarks() {
        Scanner s = new Scanner(System.in);
        System.out.println("Enter Internal Marks for 5 subjects:");
        for (int i = 0; i < 5; i++) {
            System.out.print("Subject " + (i + 1) + ": ");
            internalMarks[i] = s.nextInt();
        }
    }
}
```

SEE/Externals.java

```
package SEE;
import CIE.Internals;
import java.util.Scanner;

public class Externals extends Internals {
    private int[] seeMarks = new int[5];
    private int[] finalMarks = new int[5];
```

```
public void inputSEEmarks() {  
    Scanner s = new Scanner(System.in);  
    System.out.println("Enter SEE Marks for 5 subjects:");  
    for (int i = 0; i < 5; i++) {  
        System.out.print("Subject " + (i + 1) + ": ");  
        seeMarks[i] = s.nextInt();  
    }  
}
```

```
public void calculateFinalMarks() {  
    for (int i = 0; i < 5; i++) {  
        finalMarks[i] = internalMarks[i] + seeMarks[i];  
    }  
}
```

```
public void displayFinalMarks() {  
    displayStudentDetails();  
    System.out.println("Final Marks for 5 subjects:");  
    for (int i = 0; i < 5; i++) {  
        System.out.println("Subject " + (i + 1) + ": " + finalMarks[i]);  
    }  
}
```

Main.java

```
import SEE.Externals;  
import java.util.Scanner;  
  
class Main {  
    public static void main(String[] args) {  
        Scanner s = new Scanner(System.in);
```

```
System.out.print("Enter number of students: ");
int n = s.nextInt();

Externals[] students = new Externals[n];

for (int i = 0; i < n; i++) {
    System.out.println("\nEnter details for student " + (i + 1) + ":");
    students[i] = new Externals();
    students[i].inputStudentDetails();
    students[i].inputCIEMarks();
    students[i].inputSEEMarks();
    students[i].calculateFinalMarks();
}

System.out.println("\nFinal Marks of Students:");
for (int i = 0; i < n; i++) {
    System.out.println("\nStudent " + (i + 1) + ":");
    students[i].displayFinalMarks();
}
}
}
```

Output

```
D:\>cd javaoops

D:\javaoops>java Main
Enter number of students: 3
